

IS IT SAFE TO PLAY PAINTBALL IN THE MIDST OF THE CORONAVIRUS EPIDEMIC?

- Paintball is mostly carried out entirely outdoors, with fresh air and away from less clean environments such as movie theaters, offices, shopping centers, and schools.
- When going to play paintball you are exchanging a limited space with a high concentration of people like a stadium for a very vast space with a very small number of participants in an outdoor setting.
- Paintball rental equipment is thoroughly cleaned and disinfected with appropriate, approved products before being assigned to each customer. All customers are issued their own personal gear which is not shared with other players during games.
- Contact between people while playing is practically non-existent in paintball as the minimum distance for shots is 5-10 feet or 3 yards/meters.
- In paintball pro shops and field buildings, the areas are cleaned daily.
- Bathroom facilities are hygienic and are cleaned regularly every day.
- The weather forecasts that include warmer temperatures for days of paintball play are an advantage as the sun's rays have a negative impact on the possible spread of the virus.

We continue to monitor the situation concerning COVID-19 to provide you with the most updated safety information and adapt as circumstances evolve. Our positions have been informed by the appropriate governmental agencies. For more information and what additional safety precautions can be taken we encourage you to visit the links below:
